

DC Eagle PO Box Door

This door was patented for the Corbin Cabinet and Lock Co. in 1902.

Memorize your combination. Also, write it down and keep it in a safe place. The combination will consist of a letter and number for each dial. The combination is located on the bottom of the box. Besides the combination, there will also be a number. If you lose the combination, write to me, giving that number and I should be able to give you the combination.

There is a small notch in the door above the dials to line the tick marks to. The small white line above the letter is the zero "0" tick. The next tick to the right would be 1, and so on till you get to the next small tick above the next letter. The black spaces between the ticks are 1/2 ticks.

Examples: Left dial is set at H3 and the right dial is set at V 3 1/2

You can turn the dials either to the right or left to set the combo for that dial.

The first set of letter/number is for the left hand dial. A – K.

The second set of letter/number is for the right hand dial L-V

Slide the door knob to the right to open.

A word of caution, when the door is open, do not turn the dials, damage to the gears may result. These doors are old and have been in many years of service. Some jiggling and finessing might be needed until you are comfortable with opening them. I give them a healthy cleaning in a simple green solution to remove the heavy grime. I try to leave them in as original state as I receive them.

Thank you,

Peter Kaj
