

PKG – 2 Coffee Grinder Instructions and Care

Cleaning: Wipe off the exterior of the coffee grinder with a mild soap to clean. Do not immerse or rinse the grinder in any liquid. This is a metal burr grinder and rusting will result.

See picture below for location of Grind Adjustment Nut & location for adding your coffee beans.

- #1, Before filling, make sure the grind adjustment screw isn't tight. If it is, loosen by turning counter clockwise. The hand crank will turn easily.*
- #2, Slide open the reservoir door to add your coffee beans.*
- #3, Turn the hand crank a few times, till you are producing ground coffee.*
- #4, Turn the adjustment nut clockwise no more than 1/4 turn.*
- #5, Turn the hand crank a few times, till you are producing ground coffee.*
- #6, Repeat #4 & #5 until the desired grind is achieved.*

Damage will result if you tighten the gears to much (very hard or can't turn the handle).

Thank you,

Peter Kaj
