

# *Antique Pepper Mill Care & Use Instructions*

*Cleaning: Wipe off the exterior of the pepper mill with a mild soap to clean. Never soak the pepper mill in any liquid including plain or soapy water.*

*It is not recommended for use with salt. Rusting and corrosion will damage the internal metal parts.*

*See picture below for location of Grind Adjustment Screw & location for adding your pepper corns.*

*#1, Before filling, make sure the grind adjustment screw isn't tight. If it is, loosen by turning counter clockwise. The hand crank will turn easily.*

*#2, Slide open the door to add your pepper corn.*

*#3, Turn the hand crank a few times, till you are producing ground pepper.*

*#4, Turn the adjustment screw clockwise no more then 1/4 turn.*

*#5, Turn the hand crank a few times, till you are producing ground pepper.*

*#6, Repeat #4 & #5 until the desired grind is achieved.*

Thank you,

Peter Kaj
